

Schneider Electric Automation Starter Bundle

For **£530.00** you can make a difference to your automated control systems with the Schneider Electric Automation starter kit, including M221, HMISCU and training.

The M221 controller embeds all the features and functions you need you need to increase your bottom line. Designed for machines with hardwired controller architectures, it is one of the fastest most compact controllers in its class. Transfer applications from old to new Control platforms and reuse existing codes reducing development time. You can even batch-configure controllers right in the boxes delivered in.

Go one step further and handle all your programming, visualisation and commissioning with just one intuitive tool that is available as a free download – SoMachine Basic. A simplified engineering tool for the Modicon M221 controller and is the universal software for machines automated by MachineStruxure controllers

To help equip you to make significant difference to your automated control systems, we offer a promotional starter pack the includes:
